

## 01. Propositional Logic

### sets of numbers

$\mathbb{N}$ : natural numbers ( $\mathbb{Z}_{\geq 0}$ )

$\mathbb{Z}$ : integers

$\mathbb{Q}$ : rational numbers

$\mathbb{R}$ : real numbers

$\mathbb{C}$ : complex numbers

$\mathbb{N} \subseteq \mathbb{Z} \subseteq \mathbb{Q} \subseteq \mathbb{R} \subseteq \mathbb{C}$

### basic properties of integers

closure (under addition and multiplication)

$$x + y \in \mathbb{Z} \wedge xy \in \mathbb{Z}$$

commutativity

$$a + b = b + a \wedge ab = ba$$

associativity

$$a + b + c = a + (b + c) = (a + b) + c$$

$$abc = a(bc) = (ab)c$$

distributivity

$$a(b + c) = ab + ac$$

trichotomy

$$(a < b) \vee (a > b) \vee (a = b)$$

transitive law

$$(a < b) \wedge (b < c) \implies (a < c)$$

### definitions

even/odd

$$n \text{ is even} \leftrightarrow \exists k \in \mathbb{Z} \mid n = 2k$$

$$n \text{ is odd} \leftrightarrow \exists k \in \mathbb{Z} \mid n = 2k + 1$$

prime/composite

$$n \text{ is prime} \leftrightarrow n > 1 \text{ and } \forall r, s \in \mathbb{Z}^+, n = rs \rightarrow (r = n) \vee (s = r)$$

$$n \text{ is composite} \leftrightarrow n > 1 \text{ and } \exists r, s \in \mathbb{Z}^+ \text{ s.t. } n =$$

$$rs \text{ and } 1 < r < n \text{ and } 1 < s < n$$

divisibility ( $d$  divides  $n$ )

$$d \mid n \leftrightarrow \exists k \in \mathbb{Z} \mid n = kd$$

rationality

$$r \text{ is rational} \leftrightarrow \exists a, b \in \mathbb{Z} \mid r = \frac{a}{b} \text{ and } b \neq 0$$

floor/ceiling

$$\lfloor x \rfloor : \text{largest integer } y \text{ such that } y \leq x$$

$$\lceil x \rceil : \text{smallest integer } y \text{ such that } y \geq x$$

### rules of inference

generalisation

$$p, \therefore p \vee q$$

specialisation

$$p \wedge q, \therefore p$$

elimination

$$p \vee q; \sim q, \therefore p$$

transitivity

$$p \rightarrow q; q \rightarrow r; \therefore p \rightarrow r$$

## 03. PROOFS

### Proof by Exhaustion/Cases

- list out possible cases
  - Case 1:  $n$  is odd OR If  $n = 9$ , ...
  - Case 2:  $n$  is even OR If  $n = 16$ , ...
- therefore ...

### Proof by Contradiction

- Suppose that ...
  - iproof<sub>i</sub>
  - ...but this contradicts ...
- Therefore the assumption that ... is false.  
Hence ....

### Proof by Contraposition

- Contrapositive statement:  $\sim q \rightarrow \sim p$
- let  $\sim q$ 
  - iproof<sub>i</sub>
  - hence  $\sim p$
- $\therefore p \rightarrow q$

### Proof by Construction

- Let  $x = 3, y = 4, z = 5$ .
- Then  $x, y, z \in \mathbb{Z}_{\geq 1}$  and  
 $x^2 + y^2 = 3^2 + 4^2 = 9 + 16 = 25 = 5^2$ .
- Thus  $\exists x, y, z \in \mathbb{Z}_{\geq 1}$  such that  $x^2 + y^2 = z^2$ .

### Proof by Induction

- For each  $n \in \mathbb{Z}_{\geq 1}$ , let  $P(n)$  be the proposition "..."
- (base step)  $P(1)$  is true because imanual method<sub>i</sub>
- (induction step)
  - let  $k \in \mathbb{Z}_{\geq 1}$  s.t.  $P(k)$  is true
  - Then ...
  - proof that  $P(k + 1)$  is true - e.g.  
 $P(k + 1) = P(k) + \text{term}_{k+1}$
  - So  $P(k + 1)$  is true.
- Hence  $\forall n \in \mathbb{Z}_{\geq 1} P(n)$  is true by MI.

## INDUCTION

### mathematical induction

to prove that  $\forall n \in \mathbb{Z}_{\geq m} (P(n))$  is true,

- base step: show that  $P(m)$  is true
- induction step: show that  $\forall k \in \mathbb{Z}_{\geq m} (P(k) \Rightarrow P(k + 1))$  is true.
  - induction hypothesis: assumption that  $P(k)$  is true

### strong MI

to prove that  $\forall n \in \mathbb{Z}_{\geq 0} (P(n))$  is true,

- base step: show that  $P(0), P(1)$  are true
- induction step: show that  
 $\forall k \in \mathbb{Z}_{\geq 0} (P(0) \cdots \wedge P(k + 1) \Rightarrow P(k + 2))$  is true.

justification:

- $P(0) \wedge P(1)$  by base case
- $P(0) \wedge P(1) \rightarrow P(2)$  by induction with  $k = 0$
- $P(0) \wedge P(1) \wedge P(2) \rightarrow P(3)$  by induction with  $k = 1$
- ...
- we deduce that  $P(0), P(1), \dots$  are all true by a series of **modus ponens**

### Proofs for Sets

#### Equality of Sets (A=B)

- $(\Rightarrow)$ 
  - Take any  $z \in A$ .
  - ...
  - $\therefore z \in B$ .
- $(\Leftarrow)$ 
  - Take any  $z \in B$ .
  - ...

2.3.  $\therefore z \in A$ .

#### Element Method

- $A \cap (B \setminus C) = \{x : x \in A \wedge x \in (B \setminus C)\}$  (by def. of  $\cap$ )
- $= \{x : x \in A \wedge (x \in B \wedge x \notin C)\}$  (by def. of  $\setminus$ )
- ...
- $= (A \cap B) \setminus C$  (by def. of  $\setminus$ )

### Other Proofs

#### iff ( $A \leftrightarrow B$ )

- $(\Rightarrow)$  Suppose  $A$ .
  - ... iproof<sub>i</sub> ...
  - Hence  $A \rightarrow B$
- $(\Leftarrow)$  Suppose  $B$ .
  - ... iproof<sub>i</sub> ...
  - Hence  $B \rightarrow A$

## 02. PREDICATE LOGIC

### operations

- $\sim$ : negation (not)
- $\wedge$ : conjunction (and)
- $\vee$ : disjunction (or) - coequal to  $\wedge$
- $\rightarrow$ : if-then

### logical equivalence

- identical truth values in truth table
- definitions
- to show non-equivalence:
  - truth table method (only needs 1 row)
  - counter-example method

### conditional statements

hypothesis  $\rightarrow$  conclusion

antecedent  $\rightarrow$  consequent

- vacuously true**: hypothesis is false
- implication law**:  $p \rightarrow q \equiv \sim p \vee q$
- common statements for  $p \rightarrow q$ :
  - if p then q
  - q if p
  - p only if q
  - p iff q
  - p is sufficient for q
  - q is necessary for p
- contrapositive**:  $\sim q \rightarrow \sim p$  statement  $\equiv$  contrapositive
- inverse**:  $\sim p \rightarrow \sim q$  converse  $\equiv$  inverse
- converse**:  $q \rightarrow p$
- r is a **necessary** condition for s:  $\sim r \rightarrow \sim s$  and  $s \rightarrow r$
- r is a **sufficient** condition for s:  $r \rightarrow s$
- necessary & sufficient**:  $\leftrightarrow$

### valid arguments

- determining validity: construct truth table
  - valid  $\leftrightarrow$  conclusion is true when premises are true
- syllogism**: (argument form) 2 premises, 1 conclusion
- modus ponens**:  $p \rightarrow q; p; \therefore q$
- modus tollens**:  $p \rightarrow q; \sim q; \therefore \sim p$
- sound argument**: is valid & all premises are true

### fallacies

converse error

$$p \rightarrow q$$

$$q$$

$$\therefore p$$

inverse error

$$p \rightarrow q$$

$$\sim p$$

$$\therefore \sim q$$

## QUANTIFIED STATEMENTS

- truth set** of  $P(x) = \{x \in D \mid P(x)\}$
- $P(x) \Rightarrow Q(x) : \forall x(P(x) \rightarrow Q(x))$
- $P(x) \Leftrightarrow Q(x) : \forall x(P(x) \leftrightarrow Q(x))$

**relation between**  $\forall, \exists, \wedge, \vee$

- $\forall x \in D, Q(x) \equiv Q(x_1) \wedge Q(x_2) \wedge \cdots \wedge Q(x_n)$
- $\exists x \in D \mid Q(x) \equiv Q(x_1) \vee Q(x_2) \vee \cdots \vee Q(x_n)$

**relation between**  $\sim, \forall, \exists$

- $\sim \forall P(x) \leftrightarrow \exists x \sim P(x)$
- $\sim \exists P(x) \leftrightarrow \forall x \sim P(x)$

## 04. SETS

### notation

- set roster notation [1]:  $\{x_1, x_2, \dots, x_n\}$
- set roster notation [2]:  $\{x_1, x_2, x_3, \dots\}$
- set-builder notation:  $\{x \in \mathbb{U} : P(x)\}$
- replacement notation:  $\{t(x) : x \in A\}$

### definitions

- equal sets**:  $A = B \leftrightarrow \forall x(x \in A \leftrightarrow x \in B)$ 
  - $A = B \leftrightarrow (A \subseteq B) \wedge (A \supseteq B)$
  - order and repetition does not matter
- subset**:  $A \subseteq B \leftrightarrow \forall x(x \in A \rightarrow x \in B)$
- proper subset**:  $A \subset B \leftrightarrow (A \subseteq B) \wedge (A \neq B)$
- power set** of A:  $\mathcal{P}(A) = \{X \mid X \subseteq A\}$ 
  - $|\mathcal{P}(A)| = 2^{|A|}$ , given that A is a finite set
  - $\mathcal{P}(\emptyset) = \{\emptyset\}$ ;  $\mathcal{P}(\mathcal{P}(\emptyset)) = \{\emptyset, \{\emptyset\}\}$
  - $\mathcal{P}(\{1, 2\}) = \{\emptyset, \{1\}, \{2\}, \{1, 2\}\}$
- cardinality** of a set,  $|A|$ : number of distinct elements
- singleton**: sets of size 1
- disjoint**:  $A \cap B = \emptyset$

### methods of proof for sets

- direct proof
- element method
- truth table

### boolean operations

- union**:  $A \cup B = \{x : x \in A \vee x \in B\}$
- intersection**:  $A \cap B = \{x : x \in A \wedge x \in B\}$
- complement** (of B in A):  $A \setminus B = \{x : x \in A \wedge x \notin B\}$
- complement** (of B):  $\bar{B}$  or  $B^c = U \setminus B$ 
  - set difference law:  $A \setminus B = A \cap \bar{B}$

## 05. RELATIONS

### ordered pairs

- ordered pair**:  $(x, y)$ 
  - $(x, y) = (x', y') \leftrightarrow x = x' \text{ and } y = y'$
- Cartesian product**:  
 $A \times B = \{(x, y) : x \in A \text{ and } y \in B\}$ 
  - $|A \times B| = |A| \times |B|$
  - $\{a, b\} \times \{1, 2, 3\} = \{(a, 1), (a, 2), (a, 3), (b, 1), (b, 2), (b, 3)\}$

- **ordered tuples** : expression of the form  $(x_1, x_2, \dots, x_n)$
- defined recursively :  
 $(x_1, x_2, \dots, x_{n+1}) = ((x_1, x_2, \dots, x_n), x_{n+1})$
- $(1, 2, 5) \neq (2, 1, 5)$  although  $\{1, 2, 5\} = \{2, 1, 5\}$

relations

Let  $R$  be a relation from  $A$  to  $B$  and  $(x, y) \in A \times B$ . Then:  
 $xRy$  for  $(x, y) \in R$  and  $x\not R y$  for  $(x, y) \notin R$

- a relation from  $A$  to  $B$  is a subset of  $A \times B$ .
- a **(binary) relation** on set A is a relation from A to A.
  - subset of  $A^2$
- **inverse relation**:  $xR^{-1}y \Leftrightarrow yRx$

operations on relations

- $S \circ R$  = undergo R relation then S relation
- $(S \circ R)^{-1} = R^{-1} \circ S^{-1}$

06. EQUIVALENCE RELATIONS AND PARTIAL ORDERS

reflexivity, symmetry, transitivity

Let  $A$  be a set and  $R$  be a relation on  $A$ .

$$\begin{array}{c} \text{reflexive} \\ \forall x \in A \ (xRx) \\ \text{symmetric} \\ \forall x, y \in A \ (xRy \Rightarrow yRx) \\ \text{transitive} \\ \forall x, y, z \in A \ (xRy \wedge yRz \Rightarrow xRz) \end{array}$$

- **equivalence relation**: a relation that is reflexive, symmetric and transitive
- **equivalence class**: the set of all things equivalent to x

equivalence classes

Let  $A$  be a set and  $R$  be an equivalence relation on  $A$ .

- $[x]_{\sim}$  : **equivalence class** of  $x$  with respect to  $R$ 
  - the set of all elements of  $A$  that x is related to  
 $\forall x \in A, [x]_{\sim} = \{y \in A : xRy\}$
- $A/\sim$  : The set of all equivalent classes  
 $A/R = \{[x]_{\sim} : x \in A\}$

$xRy \Rightarrow [x] = [y] \Rightarrow [x] \cap [y] \neq \emptyset$

partitions

- a **partition** of a set  $A$  is a set  $\mathcal{C}$  of *non-empty subsets* of  $A$  such that
  0.  $\forall S \in \mathcal{C}, (\emptyset \neq S \subseteq A)$ 
    - $\mathcal{C}$  is a set of nonempty subsets of  $A$
  1.  $\forall x \in A, \exists S \in \mathcal{C} (x \in S)$ 
    - every element of  $A$  is in some element of  $\mathcal{C}$
  2.  $\forall x \in A, \forall S_1, S_2 \in \mathcal{C} (x \in S_1 \wedge x \in S_2 \Rightarrow S_1 = S_2)$ 
    - if two items of  $\mathcal{C}$  have a nonempty intersection, then they are equal
- **components** : elements of a partition
- every partition comes from an equivalence relation

partial orders

- Let  $A$  be a set and  $R$  be a relation on  $A$ .
- $R$  is **antisymmetric** if  $\forall x, y \in A \ (xRy \wedge yRx \rightarrow x = y)$ 
    - includes vacuously true cases (e.g.  $xRy \Leftrightarrow x < y$ )
  - $R$  is a **(non-strict) partial order** if  $R$  is reflexive, antisymmetric and transitive.
  - $x$  and  $y$  are **comparable** if  $\forall x, y \in A \ (xRy \vee yRx)$
  - $R$  is a **(non-strict) total order** if  $R$  is a partial order and every pair of elements are comparable
  - a smallest element of  $A$  is an element  $m \in A$  such that  $mRx$  for all  $x \in A$

well-ordering principle

- every nonempty subset of  $\mathbb{Z}_{\geq 0}$  has a smallest element.
- application: recursion has a base case

07. FUNCTIONS

definitions

- **function/map** from A to B : each element of A exactly  $f$ -related to one element of B.
  - **Important** :  $(x, y) \in f \leftrightarrow y = f(x)$
  - (F1): every element in A  $f$ -related to at least one of B  
 $\forall x \in A \exists y \in B \ (x, y) \in f$
  - (F2): every element in A  $f$ -related to at most one of B  
 $\forall x \in A \exists y_1, y_2 \in B \ ((x, y_1) \in f \wedge (x, y_1) \in f \rightarrow y_1 = y_2)$
  - $f : A \rightarrow B$  : " $f$  is a function from  $A$  to  $B$ "
  - $f : x \rightarrow y$  : " $f$  maps  $x$  to  $y$ "
  - **domain** of f =  $A$
  - **codomain** of f =  $B$
  - **range/image** of f =  $\{f(x) : x \in A\}$ 
    - \*  $\text{range}(f) \in \text{codomain}$
    - \* if  $f$  is surjective:  $\text{range}(f) \in \text{codomain} \in \text{range}(f)$
- **identity function** on A,  $\text{id}_A : A \rightarrow A$ 
  - $\text{id}_A : x \rightarrow x$
  - $\text{range} = \text{domain} = \text{codomain} = A$
  - $(P7.4.13) \ f \circ \text{id}_A = f$  and  $\text{id}_A \circ f = f$
- **well-defined function** : every element in the domain is assigned to exactly one element in the codomain

equality of functions

- same codomain and domain
- for all  $x \in \text{codomain}$ , same output

function composition

- $(g \circ f)(x) = g(f(x))$
- for  $(g \circ f)$  to be well defined, codomain of  $f$  must be equal to the domain of  $g$
- $\times$  commutative  $(g \circ f)(x) \neq (f \circ g)(x)$
- $\checkmark$  **associative** - (T6.1.26)  $f \circ (g \circ h) = (f \circ g) \circ h$

image & pre-image

- for  $f : A \rightarrow B$
- if  $X \subseteq B$ , **image** of X,  
 $f(X) = \{y \in B : y = f(x) \text{ for some } x \in X\}$
  - if  $Y \subseteq B$ , **pre-image** of Y,  
 $f^{-1}(Y) = \{x \in A : y = f(x) \text{ for some } y \in Y\}$

injection & surjection

- **surjective** (onto) : codomain = range
  - for every  $B$ , there is a  $A$   
 $\forall y \in B \exists x \in A \ (y = f(x))$
  - a function is **not** surjective iff  
 $\exists y \in B \forall x \in A \ (y \neq f(x))$
- **injective** : one-to-one
  - for every  $B$ , at most one  $A$   
 $\forall x_1, x_2 \in A \ (f(x_1) = f(x_2) \Rightarrow x_1 = x_2)$
  - a function is **not** injective iff  
 $\exists x_1, x_2 \in A \ (f(x_1) = f(x_2) \wedge x_1 \neq x_2)$
- **bijective** : both surjective & injective

inverse

- $\forall x \in A, \forall y \in B (f(x) = y \Leftrightarrow g(y) = x)$
- **uniqueness** of inverses (P2.6.16)
  - if  $g, g'$  are inverses of  $f : A \rightarrow B$ , then  $g = g'$

8. CARDINALITY

pigeonhole principle

For any function  $f$  from a finite set  $A$  with  $n$  elements to a finite set  $B$  with  $m$  elements if there is an injection  $A \rightarrow B$ , then  $n \leq m$

dual pigeonhole principle

For any function  $f$  from a finite set  $A$  with  $n$  elements to a finite set  $B$  with  $m$  elements if there is an surjection  $A \rightarrow B$ , then  $n \geq m$

T8.1.3

For any function  $f$  from a finite set  $A$  with  $n$  elements to a finite set  $B$  with  $m$  elements if there is a bijection  $A \rightarrow B$ , then  $n = m$

- A function from a finite set to a smaller finite set cannot be injective.
- **presentation**:
  - There are  $m$  pigeons and  $n$  pegionholes
  - Thus, by Pigeonhole Principle, ...

same cardinality

- A set  $A$  is said to have the same cardinality (HSC) as a set  $B$  if there is a bijection  $A \rightarrow B$
- reflexivity :  $A \text{ HSC } A$ .
- symmetry : if  $A \text{ HSC } B$ , then  $B \text{ HSC } A$ .
- transitivity : if  $A \text{ HSC } B$ , and  $B \text{ HSC } C$ , then  $A \text{ HSC } C$ .

finite sets

- A set  $A$  is finite if it HSC  $\{1, 2, \dots, n\}$  for some  $n \in \mathbb{N}$
- $n$  is the cadinality/size of  $A$ , denoted by  $|A|$
- Let  $A$  and  $B$  be sets that HSC, then  $A$  is finite iff  $B$  is finite

9. COUNTABILITY

countable sets

- A set is countable if it is finite or has the same cardinality as  $\mathbb{N}$
- $\mathbb{Z}$  is countable
- $\mathbb{N} \times \mathbb{N}$  is countable

countability

- Let  $A$  and  $B$  be sets of same cardinality.  $A$  is countable iff  $B$  is countable
- Let  $A, B$  be sets such that  $A \subseteq B$ 
  - If  $B$  is finite, then  $A$  is finite
  - If  $B$  is countable, then  $A$  is countable
- A set  $B$  is infinite if there is an injection  $f$  from some infinite set  $A$  to  $B$
- A set  $B$  is uncountable if there is an injection  $f$  from some uncountable set  $A$  to  $B$

uncountable sets

- No set  $A$  has the same cadinality as  $\mathcal{P}(A)$
- Let  $A$  be countable infinite set, then  $\mathcal{P}(A)$  is uncountable. Hence  $\mathcal{P}(\mathbb{N})$  is uncountable

non-computability

- There is a subset  $S$  of  $\mathbb{N}$  s.t no program can, when given any input  $n \in \mathbb{N}$ 
  - output T if  $n \in S$  ; and
  - output F if  $n \notin S$

i.e no program can correctly determine whether a given input n belongs to S or not, for all possible inputs n.

10. COUNTING

rules

- **addition/sum rule**: Let  $A$  and  $B$  be **disjoint** finite sets  
 $|A \cup B| = |A| + |B|$
- **difference rule**: Let  $X$  and  $Y$  be finite sets. Then  $Y \setminus X$  is finite, and if  $X \subseteq Y$   
 $|Y \setminus X| = |Y| - |X|$
- **inclusion/exclusion rule 2 sets**:  
 $|A \cup B| = |A| + |B| - |A \cap B|$
- **inclusion/exclusion rule 3 sets** :  $|A \cup B \cup C| = |A| + |B| + |C| - |A \cap B| - |B \cap C| - |C \cap A| + |A \cap B \cap C|$
- **multiplication/product rule**:  $|A \times B| = |A| \times |B|$
- **general multiplication rule**: Let  $A$  be set of size  $m$ , and for each  $x \in A$ , let  $B_x$  be set of size  $n$ . Then  $\{(x, y) : x \in A \text{ and } y \in B_x\}$  is finite and has size  $mn$
- **complement**:  $P(\bar{A}) = 1 - P(A)$
- $|\mathcal{P}(A)| = 2^{|A|}$ , given that A is a finite set

permutations

pick  $r$  elements from a set of size  $n$  without replacement where order matters

$P(n, r) = \frac{n!}{(n-r)!}$  (also  ${}_nP_r, P_r^n$ )  
if  $r > n$  , 0 ways

permutations with indistinguishable objects

For  $n$  objects with  $n_k$  of type  $k$  indistinguishable from each other, the total number of distinguishable permutations  
 $= \frac{n!}{n_1!n_2!...n_k!}$   
E.g. num of permuatations for "EGG" =  $\frac{3!}{2!} = 3$

combinations

$\binom{n}{r} = \frac{n!}{r!(n-r)!}$  (also  $C(n, r), {}_nC_r, C_{n,r}, {}^nC_r$ )  
 $r$ -combinations from  $n$  elements with **repetition**  
 $= \binom{r+n-1}{r}$

11. GRAPHS

- mathematical structures used to model pairwise relations between objects

types of graphs

undirected graph

- denoted by  $G = (V, E)$ , comprising
  - nonempty set of *vertices/nodes*,  $V = \{v_1, v_2, \dots, v_n\}$
  - a set of *edges*,  $E = \{e_1, e_2, \dots, e_k\}$
- $e = \{v, w\}$  for an undirected edge  $E$  incident on vertices  $v$  and  $w$

directed graph

- denoted by  $G = (V, E)$ , comprising
  - nonempty set  $V$  of *vertices*
  - a set  $E$  of *directed edges* (ordered pair of vertices)
- $e = (v, w)$  : an directed edge  $E$  from vertex  $v$  to vertex  $w$

simple graph

- undirected graph** with no loops or parallel edges

complete graph

- a complete graph on  $n$  vertices,  $n > 0$ , denoted  $K_n$ , is a simple graph with  $n$  vertices and exactly one edge connecting each pair of distinct vertices

subgraph of a graph

- $H$  is a subgraph of  $G \Leftrightarrow$
- every vertex in  $H$  is also a vertex in  $G$
- every edge in  $H$  is also an edge in  $G$
- every edge in  $H$  has the same endpoints as it has in  $G$

paths and walks

- Let  $G$  be a graph; let  $v$  and  $w$  be vertices of  $G$ .
- walk** (from  $v$  to  $w$ ): a finite alternating sequence of adjacent vertices and edges of  $G$ .
    - e.g.  $v_0e_1v_1e_2 \dots v_{n-1}e_nv_n$
    - length** of walk: the number of edges,  $n$

- path** (from  $v$  to  $w$ ): a trail that does not contain a repeated vertex
- closed walk**: walk that starts and ends at the same vertex

cycles

- circuit/cycle**: an undirected graph  $G(V, E)$  where
  - $V = \{x_1, x_2, \dots, x_n\}$
  - $E = \{\{x_1, x_2\}, \{x_2, x_3\}, \dots, \{x_{n-1}, x_n\}, \{x_n, x_1\}\}$
  - $n \in \mathbb{Z}_{\geq 3}$
  - aka a closed walk that does not contain a repeated edge
- simple circuit/cycle**: does not have any other repeated vertex except the first and last
- (an undirected graph is) **cyclic** if it contains a loop/cycle

connectedness

- vertices  $v$  and  $w$  are connected  $\Leftrightarrow \exists$  a walk from  $v$  to  $w$
- graph  $G$  is connected  $\Leftrightarrow \forall$  vertices  $v, w \in V, \exists$  a walk from  $v$  to  $w$

connected component

- a connected subgraph of the largest possible size
- graph  $H$  is a connected component of graph  $G \Leftrightarrow$ 
  - $H$  is a subgraph of  $G$
  - $H$  is connected
  - no connected subgraph of  $G$  has  $H$  as a subgraph and contains vertices or edges that are not in  $H$

Hamiltonian circuit

- Hamiltonian circuit** (for  $G$ ): a *simple circuit* that includes every vertex of  $G$ .
  - does not need to include all the edges of  $G$  (unlike Euler circuit)
- Hamilton(ian) graph**: contains a Hamiltonian circuit
- If  $G$  is a Hamiltonian circuit, then  $G$  has subgraph  $H$  where:
  - $H$  contains every vertex of  $G$
  - $H$  is connected
  - $H$  has the same number of edges as vertices
  - every vertex of  $H$  has degree 2

counting walks of length N

number of walks of length  $n$  from  $v_i$  to  $v_j$

= the  $ij$ -th entry of  $A^n$

isomorphism

- graph isomorphism ( $\cong$ ) is an equivalence relation.
- Let  $G = (V_G, E_G)$  and  $G' = (V_{G'}, E_{G'})$  be two graphs.  
 $G \cong G' \Leftrightarrow$  there exist bijections  $g : V_G \rightarrow V_{G'}$  and  $h : E_G \rightarrow E_{G'}$  that preserve the edge-edgepoint functions of  $G$  and  $G'$  in the sense that  $\forall v \in V_G$  and  $e \in E_G$ ,  $v$  is an endpoint of  $e \Leftrightarrow g(v)$  is an endpoint of  $h(e)$ .

12. TREES

- tree** is a **connected acyclic undirected** graph
  - (L10.5.4) If  $G$  is a connected graph with  $n$  vertices and  $n - 1$  edges, then  $G$  is a tree.
- trivial tree**: graph that comprises a single vertex
- forest**  $\Leftrightarrow$  graph is circuit-free and not connected
  - a group of trees
- terminal vertex**: a vertex of degree 1
- internal vertex**: a vertex of degree greater than 1

rooted trees

- rooted tree**: a tree in which there is one vertex that is distinguished from the others and is called the root.
- level** (of a vertex): the number of edges along the unique path between it and the root
- height** (of a rooted tree): the maximum level of any vertex of the tree
- children, parent, siblings, ancestor, descendant

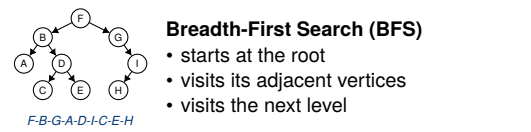

binary tree

- binary tree**: a rooted tree in which every parent has at most 2 children
  - at most one left child and at most one right child
- full binary tree**: a binary tree in which every parent has exactly 2 children
- (left/right) **subtree**: Given any parent  $v$  in a binary tree  $T$ , the binary tree whose root is the (left/right) child of  $v$ , whose vertices consist of the left child of  $v$  and all its descendants, and whose edges consist of all those edges of  $T$  that connect the vertices of the left subtree.

**T10.6.1:** Full Binary Tree Theorem

If  $T$  is a full binary tree with  $k$  internal vertices, then  $T$  has a total of  $2k + 1$  vertices and has  $k + 1$  terminal vertices.

binary tree traversal

Depth-First Search (DFS)

- pre-order**
  - current vertex  $\rightarrow$  left subtree  $\rightarrow$  right subtree
- in-order**
  - left subtree  $\rightarrow$  current vertex  $\rightarrow$  right subtree
- post-order**
  - left subtree  $\rightarrow$  right subtree  $\rightarrow$  current vertex

spanning trees

- spanning tree** (for a graph  $G$ ): a subgraph of  $G$  that contains every vertex of  $G$  and is a tree.
  - $w(e)$  - weight of edge  $e$
  - $w(G)$  - total weight of  $G$
- weighted graph**: each edge has an associated positive real number weight
  - total weight**: sum of the weights of all edges
- minimum spanning tree**: least possible total weight compared to all other spanning trees

Kruskal's algorithm

- For a connected weighted graph  $G$  with  $n$  vertices:
- initialise  $T$  to have all the vertices of  $G$  and no edges.
  - let  $E$  be the set of all edges in  $G$ ; let  $m = 0$
  - while  $(m < n - 1)$ 
    - find and remove the edge  $e$  in  $E$  of least weight
    - if adding  $e$  to the edge set of  $T$  does not produce a circuit:
      - add  $e$  to the edge set of  $T$
      - set  $m = m + 1$

Prim's algorithm

- For a connected weighted graph  $G$  with  $n$  vertices:
- pick any vertex  $v$  of  $G$  and let  $T$  be the graph with this vertex only
  - let  $V$  be the set of all vertices of  $G$  except  $v$
  - for  $(i = 0$  to  $n - 1)$ 
    - find the edge  $e$  in  $G$  with the least weight of all the edges connected to  $T$ . let  $w$  be the endpoint of  $e$ .
    - add  $e$  and  $w$  to the edge and vertex sets of  $T$
    - delete  $w$  from  $v$

LOGICAL EQUIVALENCES			SET IDENTITIES		
commutative laws	$p \wedge q \equiv q \wedge p$	$p \vee q \equiv q \vee p$	commutative laws	$A \cap B = B \cap A$	$A \cup B = B \cup A$
associative laws	$(p \wedge q) \wedge r \equiv p \wedge (q \wedge r)$	$(p \vee q) \vee r \equiv p \vee (q \vee r)$	associative laws	$(A \cap B) \cap C = A \cap (B \cap C)$	$(A \cup B) \cup C = A \cup (B \cup C)$
distributive laws	$p \wedge (q \vee r) \equiv (p \wedge q) \vee (p \wedge r)$	$p \vee (q \wedge r) \equiv (p \vee q) \wedge (p \vee r)$	distributive laws	$A \cap (B \cup C) = (A \cap B) \cup (A \cap C)$	$A \cup (B \cap C) = (A \cup B) \cap (A \cup C)$
identity laws	$p \wedge \text{true} \equiv p$	$p \vee \text{false} \equiv p$	identity laws	$A \cap U = A$	$A \cup \emptyset = A$
idempotent laws	$p \wedge p \equiv p$	$p \vee p \equiv p$	idempotent laws	$A \cap A = A$	$A \cup A = A$
annihilators laws	$p \vee \text{true} \equiv \text{true}$	$p \wedge \text{false} \equiv \text{false}$	annihilators laws	$A \cap \emptyset = \emptyset$	$A \cup U = U$
negation laws	$p \vee \sim p \equiv \text{true}$	$p \wedge \sim p \equiv \text{false}$	complement laws	$A \cap \overline{A} = \emptyset$	$A \cup \overline{A} = U$
double negation law	$\sim(\sim p) \equiv p$	—	double <b>complement</b> law	$\overline{(\overline{A})} = A$	—
absorption laws	$p \vee (p \wedge q) \equiv p$	$p \wedge (p \vee q) \equiv p$	absorption laws	$A \cup (A \cap B) = A$	$A \cap (A \cup B) = A$
De Morgan's Laws	$\sim(p \vee q) \equiv \sim p \wedge \sim q$	$\sim(p \wedge q) \equiv \sim p \vee \sim q$	De Morgan's Laws	$\overline{A \cup B} = \overline{A} \cap \overline{B}$	$\overline{A \cap B} = \overline{A} \cup \overline{B}$
Implication law	$p \rightarrow q \equiv \sim p \vee q$	-	Set difference	$A \setminus B \equiv A \cap \overline{B}$	-

## proven:

### number theory

- the product of 2 consecutive odd numbers is always odd.
- the difference between 2 consecutive squares is always odd
- P3.2.4 - the square of any 2 even integers is even
- there is no greatest integer
- there are infinitely many prime numbers
- for all positive integers  $a$  and  $b$ , if  $a|b$ , then  $a \leq b$ .
- P3.2.8 - for all integers  $n$ , if  $n^2$  is even then  $n$  is even
- all integers are rational numbers
- the sum of any 2 rational numbers is rational
- there exist irrational numbers  $p$  and  $q$  such that  $p^q$  is rational
- $\sqrt{2}$  is irrational.
- the only divisors of 1 are 1 and  $-1$ .

#### divisibility

- L8.1.5 - Let  $d, n \in \mathbb{Z}$  with  $d \neq 0$ . Then  $d \mid n \Leftrightarrow n/d \in \mathbb{Z}$
- L8.1.9 - Let  $d, n \in \mathbb{Z}$ . If  $d \mid n$ , then  $-d \mid n$  and  $d \mid -n$  and  $-d \mid -n$
- L8.1.10 - Let  $d, n \in \mathbb{Z}$ . If  $d \mid n$  and  $d \neq 0$ , then  $|d| \leq |n|$
- L8.2.5 - **Prime Divisor Lemma** (non-standard name):
  - Let  $n \in \mathbb{Z}_{\geq 2}$ . Then  $n$  has a prime divisor.
- P8.2.6 - **sizes of prime divisors**:
  - Let  $n$  be a composite positive integer. Then  $n$  has a prime divisor  $p \leq \sqrt{n}$ .

### logic

- negation of a universal statement:
  - $\sim \forall P(x) \leftrightarrow \exists x \sim P(x)$
- negation of an existential statement:
  - $\sim \exists P(x) \leftrightarrow \forall x \sim P(x)$
- negation for more predicates :
  - $\sim \forall x \exists y Q(x, y) \leftrightarrow \exists x \forall y \sim Q(x, y)$

### sets

- P4.2.7 -  $\emptyset \subseteq$  all sets

- T4.1.18 - there exists a unique set with no element. It is denoted by  $\emptyset$ .
- E4.3.7 - for all  $A, B$ :  $(A \cap B) \cup (A \setminus B) = A$
- E4.3.9(1) -  $(A \cap B) \subseteq A$
- E4.3.9(2) -  $A \subseteq (A \cup B)$
- E4.3.10 -  $A \subseteq B \wedge B \subseteq C \rightarrow A \subseteq (B \cap C)$
- T4.6 -  $A \subseteq B \Leftrightarrow A \cup B = B$
- T5.3.11(1) - let  $A, B$  be disjoint finite sets. Then  $|A \cup B| = |A| + |B|$
- T5.3.11(2) - let  $A_1, A_2, \dots, A_n$  be pairwise disjoint finite sets. Then  $|A_1 \cup A_2 \cup \dots \cup A_n| = |A_1| + |A_2| + \dots + |A_n|$
- T5.3.12 - **Inclusion-Exclusion Principle**:
  - for all finite sets  $A$  and  $B$ ,  $|A \cup B| = |A| + |B| - |A \cap B|$

### relations

- E6.2.2 - The equality relation  $R$  on a set  $A$  has equivalence classes of the form  $[x] = \{y \in A : x = y\} = \{x\}$  where  $x \in A$
- L6.3.11 - Let  $R$  be an equivalence relation on a set  $A$ . Then  $A/R$  is a partition of  $A$ .
- If  $\mathcal{C}$  is a partition of  $A$ , then there is an equivalence relation of  $R$  on  $A$  such that  $A/R = \mathcal{C}$ .
- L6.3.5 - Let  $\sim$  be an equivalence relation a set  $A$ .
  - $x \in [x]$  for all  $x \in A$
  - any equivalence class is non empty
- L6.3.6 -  $\forall x, y \in A$  if  $[x] \cap [y] \neq \emptyset$ , then  $[x] = [y]$
- Consider a partial order  $\preceq$  on set  $A$ .
  - A smallest element is minimal.
  - There is at most one smallest element.
- T6.4 -  $x \sim y \leftrightarrow [x] = [y]$ , where  $\sim$  is an equivalence relation
- P7.4.3 - if  $f$  is a bijection  $A \rightarrow B$ , then  $f^{-1}$  is a bijection  $B \rightarrow A$

### functions

- P7.4.13 -  $f \circ \text{id}_A = f$  and  $\text{id}_A \circ f = f$
- P7.4.3 - if  $f$  is a bijection  $A \rightarrow B$ , then  $f^{-1}$  is a bijection  $B \rightarrow A$
- T7.6 - if  $f$  is surjective, and  $g \circ f = \text{id}_A$ , then  $g$  is injective

- E7.9 - Let  $f : A \rightarrow B$ . if  $f^{-1}$  is a function  $B \rightarrow A$ , then  $f^{-1}$  is bijective
- $\text{range}(f) \in \text{codomain}$
- if  $f$  is surjective:  $\text{range}(f) \in \text{codomain} \in \text{range}(f)$

### graphs

- L10.2.1 - Let  $G$  be a graph.
  - L10.2.1a - If  $G$  is connected, then any two distinct vertices of  $G$  can be connected by a path
  - L10.2.1b - If vertices  $v$  and  $w$  are part of a circuit in  $G$  and one edge is removed from the circuit, then there still exists a trail from  $v$  to  $w$  in  $G$ .
  - L10.2.1c - If  $G$  is connected and  $G$  contains a circuit, then an edge of the circuit can be removed without disconnecting  $G$ .
- L10.5.1 - Any non-trivial tree has at least one vertex of degree 1.
- T10.5.2 - Any tree with  $n$  vertices ( $n > 0$ ) has  $n - 1$  edges.
- L10.5.3 - If  $G$  is any connected graph,  $C$  is any circuit in  $G$ , and one of the edges of  $C$  is removed from  $G$ , then the graph that remains is still connected.
- L10.5.4 - If  $G$  is a connected graph with  $n$  vertices and  $n - 1$  edges, then  $G$  is a tree.
- T10.6.1 - If  $T$  is a full binary tree with  $k$  internal vertices, then  $T$  has a total of  $2k + 1$  vertices and has  $k + 1$  terminal vertices.
- T10.6.2 - For non-negative integers  $h$ , if  $T$  is any binary tree with height  $h$  and  $t$  terminal vertices, then  $t \leq 2^h$ .
- P10.7.1 -
  - Every connected graph has a spanning tree.
  - Any two spanning trees for a graph have the same number of edges

### abbreviations

- L - lemma
- E - example
- P - proposition
- T - theorem
